FUNDING

- 2020 – 2022 Quantifying secondary health impacts of COVID-19
 Google.org
 Co-investigator (PI: Jennifer Stevens)
The goal of this project is to quantify the impact of COVID-19 on non-COVID-associated healthcare. A fundamental hypothesis is that preventive care and routine care will be delayed and deferred, leading to subsequent increased healthcare utilization.
- 2018 – 2021 A new approach to patient safety: identifying risky clinical states to reduce preventable harms for hospitalized patients
 Doris Duke Charitable Foundation
 Collaborator (PI: Jennifer Stevens)
Our proposal developed and refined a tool to quantify the level of risk of preventable patient harms in intensive care units, prospectively validated this tool, and spread this tool to a new clinical environment.
